

The author, a simple self-taught, has decided to change his main hand at the adult age because not everything was perfect in his life. The reasons he made this significant change are explained, as much as possible. The future has shown that this decision was good although nobody had spoken to him about birth laterality (handedness) and the fact that the dominance of one brain hemisphere with respect to the other is a natural genetic condition and that it would be very practical to perceive it at birth, as is the case with the sex, since it lasts the whole life. The consequence of such dominance is that one uses the corresponding hand as the main hand. However, it is obvious that the dominance is often ignored. Is this important? It is very important actually because of the consequences on the individual. The book speaks of a few tests to determine the dominance and speaks about the languages, the writings and the human communication. The significance of the laterality is great and essential. Humanity is binary and many of its characteristics can be explained by this study.
