

This volume comprises a complete study of the use of metal in construction, including everything from technical details to the realization of the projects. The examples featured have been selected from the work of renowned international architects and that of emerging, young talent in the field. The architects themselves take readers through these innovative solutions for this material by way of concise and informative texts, which provide valuable insight. A host of full-color photographs illustrate each and every project and help to make this book a valuable source of inspiration for students as well as for the fully-fledged architect and building professional.
