

Cumitech 45 offers a concise and inclusive description of infections in solid-organ transplant recipients of liver, kidney, kidney-pancreas, heart, lung, and intestinal transplants. This text discusses the changing trends in immunosuppression, immunizations, and diagnostic microbiology testing. Readers will be able to use this up-to-date information to determine what infections to consider for all time periods post transplant, and to help decide which lab tests to use for diagnosis and patient management. A complete reference list is included with this Cumitech, as well as important tables and figures to ease reader comprehension. Intended for clinicians, transplant specialists, pathologists, and microbiologists, this Cumitech will also be useful for medical students, instructors, and laboratory managers.
