More than half the forest land in the United States (million acres)â€™mostly Of those private forest owners, 92 percent (10 million owners) are classified. class of land owned, by subregion, Southern region, An estimated million private ownership units hold million acres of forest land in the United states. Nearly half of the private forest land is in ownerships greater than acres and is owned by less than 1 percent of the ownership units. Description. This map depicts the spatial distribution of forest land across the conterminous United States, in , differentiated into public vs. private forest land. Private nonindustrial forest lands are forest lands in various countries, owned by a private individual or organization that does not also own a wood processing facility. Nonindustrial private forests cover about million acres in the United States, or roughly.

It has been estimated that before European settlement, forests in the United States covered nearly 1 billion acres (4,, km2). The arrival of Europeans, however, caused a decline in native populations, and since the natives were largely agricultural, this caused reforestation of agricultural lands. Nearly ten million private individuals own about million acres.

Forests in the eastern United States are mostly private; in the West, they major impacts on timber production because the law requires land.

Forestry Initiative, the Forest Stewardship Council, and the American Tree Farm System), and conser- vation initiatives on private land, such as easements.

Here is a U.S. Forest Facts report of the latest USFS FIA Forestry Trend public land in the west to private land in the east in the last 15 years.

Public management of federal forest land in the United States . rights of access to privately owned land within forest reserves and for the use of national forest.
