

This CD-ROM is a complete reference on pharmacokinetics, mechanisms of action and therapeutic application of drugs. This edition provides the latest information on molecular pharmacology as it redefines the definitive database of pharmacologic therapeutics. All the newly approved drugs are included. For each drug class, there is an overview of chemical composition, mechanisms of action, indications and contraindications, clinical applications and potential side-effects. As a course text or a daily reference in clinical practice, the book offers full coverage of basic science and clinical coverage as it pertains to effective drug therapy.
