The index of coincidence is a measure of how similar a frequency distribution is the chance that 2 letters are alike, it is called the Index of Coincidence, or I.C. The index of coincidence shows how likely is the situation that during comparing some two texts (letter by letter), two currently compared letters are the same. From Wikipedia, The index of coincidence provides a measure of how likely it is to draw two matching letters by randomly selecting two letters from a given text. Coincidence: coincidence happens when two or more things occur at the same time by chance. Or simply could be defined as something happening by chance. Index of Coincidence is the probability that when selecting two letters from a text (without replacement), the two letters are the same. The step shows letter frequencies for both plaintext and ciphertext. It also calculates the index of coincidence for the ciphertext and the estimated keyword length. I was sitting at my desk the other day when the phone rang. It was an old friend - I'll call him Horace - and he was in a state of some. Index of coincidence is a number that can be used in cryptanalysis. This page explains how it is calculated. The index of coincidence is a number that can be used in cryptanalysis to help determine how a ciphertext has been encrypted. To learn more.

THE INDEX OF COINCIDENCE AND ITS APPLICATIONS IN In none of the cases above is the index of coincidence positive, but the value.

Results indicate that under certain constraints on the encrypting key, the index of coincidence can be applied to text decrypted using a small. The Index of Coincidence and Its Applications in Cryptography. Its author was William Friedman, a man whose legacy and contribution to cryptography David.
