There was an inherent difficulty that faced intelligence agencies that lead to the inability to prevent the Al Qaeda Madrid Train bombing on 11 March 2004 â€" exactly 911 days after the 11 September 2001 (9/11) Al Qaeda attacks in the USA. Intelligence analysts can only be 100% accurate on future events if there is 100% specific and certain information. In general the gathers of data and subsequently analysts in intelligence agencies face severe limitations given their remit is not as historians in describing the past but being accurate in both forecasting and predicting the future. To be sure there are few good sources of data on events yet to happen, as is the dilemma where too many variables exist. the purpose of this article is two-fold. Firstly to elaborate the three methodologies noted in substantial seminal literature validating each in relevance for anti-terrorist intelligence analysis. Secondly, to provide an innovative contribution by placing the three methodologies in perspective of the Al-Queda Madrid Train bombing on 11 March 2004. This will be pursued under four headings: The Event: Madrid 11 March 2004; Trends and Patterns; Frequency; and Probability.
