

This book is the final one in a series of three texts which together provide a modern, complete and authoritative account of our present knowledge of the stars. It discusses the internal structure and the evolution of stars, and is completely self-contained. There is an emphasis on the basic physics governing stellar structure and the basic ideas on which our understanding of stellar structure is based. The book also provides a comprehensive discussion of stellar evolution. Careful comparison is made between theory and observation, and the author has thus provided a lucid and balanced introductory text for the student. As for volumes 1 and 2, volume 3 is self-contained and can be used as an independent textbook. The author has not only taught but has also published many original papers in this subject. Her clear and readable style should make this text a first choice for undergraduate and beginning graduate students taking courses in astronomy and particularly in stellar astrophysics.

Cambridge Core - Introduction to Stellar Astrophysics - by Erika Bohm-Vitense - Thermal equilibrium. pp 11 - Influence of convection zones on stellar structure. Introduction to Stellar Astrophysics has 12 ratings and 0 reviews. This book is the final one in a series of three texts which together provide a modern. students taking courses in astronomy and particularly in stellar astrophysics. Introduction to stellar astrophysics. Volume 3. Stellar structure and evolution. Introduction to stellar astrophysics. Volume 3. Stellar structure and evolution., by Bohm-Vitense, E.. Cambridge University Press, Cambridge (UK), , p. Download Citation on ResearchGate Introduction to stellar astrophysics. Volume 3. Stellar structure and evolution This text discusses the internal structure and. Download Citation on ResearchGate Introduction to stellar astrophysics. Vol. 3 - Stellar structure and evolution The present volume on current physical. Veja gratis o arquivo Introduction to Stellar Astrophysics Vol 3 Erika Bohm Vitense enviado para a disciplina de Astronomia e Astrofisica Categoria: Outros.
