In this lecture we describe a very general problem called linear programming that can be Using linear programming to solve max flow and min-cost max flow.

Explains the terminology and demonstrates the basic techniques for 'linear programming'; that is, for maximizing or minimizing a linear relation subject to certain.

Linear programming, sometimes known as linear optimization, is the problem of maximizing or minimizing a linear function over a convex polyhedron specified. Linear programming, mathematical modeling technique in which a linear function is maximized or minimized when subjected to various constraints.

Linear programming is part of an important area of mathematics called optimization techniques as it is literally used to find the most optimized solution to a.
