

Due to the high amount of inputs which produce undesirable wastes in aquaculture systems, the development and application of technologies in reducing nutrient wastes from prawn ponds have been examined. At present, integrating seaweed with intensive aquaculture systems is considered a viable solution to increase overall profits, social benefits and diversified production. At present, there are many seaweed species which are integrated with animal species in order to recycle parts of the non-retained nutrients into harvestable products. There are a plenty studies which report that Sargassum sp. is capable of removing a significant proportion of the nutrients excreted by finfish such as salmon, seabream, seabass and tilapia. However, no research has investigated the feasibility or application of the integrated culture of Sargassum sp. and prawn. This book, therefore, provides further knowledge on the nutrient uptake by Sargassum sp. in an integrated aquaculture system. The outcomes of any such research undertaken in this book can also provide the baseline data for the development of Sargassum as a biofilter in aquaculture.

Your Body Believes You (Touch Me ... Please Book 1), CITIES ON A HILL, Applied Combinatorics, 4TH EDITION, Probsthains oriental catalogue, No. XXVIII; Indian literature, art and religion, Voyage Au Bresil Dans Les Annees 1815, 1816 Et 1817. Atlas (Histoire) (French Edition), Evaluation Findings of the Mirolux Plus 30 Pavement Marking Retroreflectometer (Technical Evaluation Report), A Short History of Greek Mathematics (AMS Chelsea Publishing), Cat in a Yellow Spotlight: A Midnight Louie Mystery (The Midnight Louie Mysteries Book 26), Ri TB Management Accounting,
