

This book gives a comprehensive treatment of random phenomena and distribution results in diophantine approximation, with a particular emphasis on quadratic irrationals. It covers classical material on the subject as well as many new results developed by the author over the past decade. A range of ideas from other areas of mathematics are brought to bear with surprising connections to topics such as formulae for class numbers, special values of L-functions, and Dedekind sums. Care is taken to elaborate difficult proofs by motivating major steps and accompanying them with background explanations, enabling the reader to learn the theory and relevant techniques. Written by one of the acknowledged experts in the field, Probabilistic Diophantine Approximation is presented in a clear and informal style with sufficient detail to appeal to both advanced students and researchers in number theory.

Turing Machines With Sublogarithmic Space (Lecture Notes in Computer Science),  
Encyclopaedia Medica. Vol. V. Filix Mas to Heart., 9/11 Commission Report : Final Report  
of the National Commission on Terrorist Attacks Upon the United States - With Interim  
Reports, Press Releases, and Index of the Final Report, Women Feminism & Biology Birke,  
One hundred chess gems, Designing Object-oriented Software(Chinese Edition), A guide to  
the identification of our more useful timbers, being a manual for the use of the students of  
forestry, The Pictorial Encyclopedia of Insects,
