

Describes the surface features, composition, moons and rings, and efforts to study the planet Saturn.

Saturn is the sixth planet from the Sun and the second-largest in the Solar System, after Jupiter. It is a gas giant with an average radius about nine times that of Earth. We know many facts about Saturn. After all, Saturn can be seen without a telescope, but it was more recently that we found the best feature, Saturn's rings.

Saturn is the sixth planet from the sun and the second largest planet in the solar system. Saturn was the Roman name for Cronus, the lord of the sky. It was not until that Christiaan Huygens correctly inferred the geometry of the rings. Saturn's rings remained unique in the known solar system until

SATURN. The second largest planet in the solar system, Saturn is a gas giant composed primarily of hydrogen and helium. But it's best known for the bright.

Saturn, second largest planet of the solar system in mass and size and the sixth in distance from the Sun. In the night sky Saturn is easily visible.
