

Unmanned ground vehicles (UGV) are expected to play a key role in the Army's Objective Force structure. These UGVs would be used for weapons platforms, logistics carriers, and reconnaissance, surveillance, and target acquisition among other things. To examine aspects of the Army's UGV program, assess technology readiness, and identify key issues in implementing UGV systems, among other questions, the Deputy Assistant Secretary of the Army for Research and Technology asked the National Research Council (NRC) to conduct a study of UGV technologies. This report discusses UGV operational requirements, current development efforts, and technology integration and roadmaps to the future. Key recommendations are presented addressing technical content, time lines, and milestones for the UGV efforts.

All are verry like the Technology Development for Army Unmanned Ground Vehicles book
Our boy friend Madeline Black place his collection of book to me. Maybe you interest a book,
visitor should not post this file at my site, all of file of pdf in thepepesplace.com placed at
therd party blog. If you like full copy of a book, visitor can buy this hard copy in book store,
but if you want a preview, this is a web you find. Happy download Technology Development
for Army Unmanned Ground Vehicles for free!
