

Union membership has dropped severely from its peak post World War II years, from over 35% of the working population to 11.3% in 2013. Without the public unions remaining relatively constant, the figure would be much worse. What are the reasons for the decline? Many books have been written offering explanations but avoided providing solutions to impede this fall. Steven Tull has crossed the boundary, detailing several viable proposals that union leadership could, should and must embrace to stop the downward slide. He points out that some form of unionism is central preventing the working class from descending back into the abyss of the late 1800s. The book takes the reader from the early days of the labor movement to the present and provides a detailed history of the union growth, their descent and their inter working relationship with both political parties. The author devotes chapters to the NLRB, charter schools, healthcare, right to work, card check, immigration and the national debt. The unions are intertwined with all of these subjects and their future is strongly influenced by each one of them. The union leaderships fear of losing their stronghold with their membership has prevented them from correcting their downfall. The lifeboat is this book.
