

This book is a survey on the problem of choosing from a tournament. It brings together under a unified and self-contained presentation results and concepts from Graph Theory, Choice Theory, Decision Science and Social Choice which were discovered in the last ten years. Classical scoring and ranking methods are introduced, including the Slater orderings, as well as new statistical methods for describing a tournament, graph-theoretical methods based on the covering relation and game-theoretical methods. As an illustration, results are applied to the classical problem of Majority Voting: How to deal with the Condorcet Paradox.

Law Enforcement Effectiveness Conference, Combinatorial Theory Seminar Eindhoven University of Technology (Lecture Notes in Mathematics), Little Es First Bank Account (The Young E Series) (Volume 2), Feminist Theory in International Relations: A workbook and resources manual for NGO training: Feminist Theory in International Relations (Gender and Inclusive Practices Training Manuals), Real Estate Math: Sample Problems and Solutions, The New Psychology and the Teacher, Diccionario Argot-Lunfardo Lunfa-Argot (Spanish Edition), The Indian City: Poverty, Ecology and Urban Development, Anwendungsbereich und Grenzen des Parlamentsauflösungsrechts nach dem Bonner Grundgesetz (Europäische Hochschulschriften / European University Studies ... Universitaires Europeennes) (German Edition), The Social Context of Residential Integration: Ethnic Groups in the United States and Canada (The New Americans: Recent Immigration and American Society),
