

For anyone who treats postmenopausal women, this latest edition of Rogerio Lobos classic work combines the best from two well-known references: Menopause, and the second edition of Treatment of the Postmenopausal Woman. By adding significant discussions of the basic science behind menopause, it is possible to objectively assess the clinical value and limitations of current approaches to treatment and provide a basis and rationale for strategies that will result in better individualized and specialized care. Not only does the third edition discuss diagnosis and treatment of menopause but it covers biological, anatomical, physiological, pathobiological, and pharmacological aspects as well bringing together, in one source, all of the information needed to understand and treat postmenopausal conditions.

* Over 50% new material representing the vast amount of information available since the Womens Health Initiative (WHI) clinical trials were completed making this the most up-to-date reference on postmenopausal women* Includes several new sections on comparisons between clinical trials and observational data, urology, and pelvic support* Each section is preceded by a preface to put the area into context with many chapters having suggested treatment regimens
