

For thirty years, Robert J. Sternberg has been among the most vocal critics of narrow conceptions of intelligence. In *Wisdom, Intelligence, and Creativity Synthesized* Sternberg critically reviews and summarizes the best research available on human intelligence. He argues that any serious understanding of intelligence must go beyond the standard paper and pencil tests currently in use. In addition to analytical and quantitative abilities, a theory of intelligence must take account of peoples creative abilities - their ability to go beyond given information and imagine new and exciting ways of reformulating old problems. It must also take into account peoples ability to weigh options carefully and act prudently. Understanding ones own intellectual shortcomings and learning how to overcome, Sternberg argues, is just as important as developing ones strengths. As he weaves his way through decades of important research on these questions, Sternberg develops a vision of human intelligence that is far more nuanced and accurate than anything previously offered. *Wisdom, Intelligence, and Creativity Synthesized* is essential reading for psychologists, cognitive scientists, educators, and organizational researchers. Robert J. Sternberg is Dean of the School of Arts and Sciences and Professor of Psychology at Tufts University. Prior to being at Tufts, he was IBM Professor of Psychology and Education, Professor of Management in the School of Management, and Director of the Center for the Psychology of Abilities, Competencies, and Expertise at Yale University. This center, now relocated to Tufts, is dedicated to the advancement of theory, research, practice, and policy advancing the notion of intelligence as developing expertise, as a construct that is modifiable and capable, to some extent, of development throughout the lifespan. Author of over 1,100 articles, chapters, and books, Sternbergs research focuses on intelligence, creativity, and wisdom, and he has studied love and close relationships as well as hate.
