

Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connors' experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling, well-documented, clear narratives that convey their work honestly and in proper context, they have succeeded admirably. *Veterinary Pathology*, July 2009 [The book is] clearly written, has a logical step-by-step structure, is easy to read and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing. *Aquaculture International*, April 2009 *Writing Scientific Research Articles: Strategy and Steps* guides authors in how to write, as well as what to write, to improve their chances of having their articles accepted for publication in international, peer-reviewed journals. The book is designed for scientists who use English as a first or an additional language; for research students and those who teach them paper writing skills; and for early-career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments, as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at [www.writeresearch.com.au](http://www.writeresearch.com.au) for more information.
